PROVISIONAL HOURLY VALUES OF EQUATORIAL Dst FOR 1964, 1965, 1966, AND 1967

by
Masahisa Sugiura and Shirley Cain
Goddard Space Flight Center

INTRODUCTION

Hourly values of equatorial Storm Time Variation (Dst) provide an index of magnetic activity as a function of universal time (UT). To a first approximation, Dst represents the diamagnetic effect of transient plasmas which are either injected into the magnetosphere or brought into existence by energization of the magnetospheric plasmas. The effect is such as to decrease Dst level. To a certain extent, Dst reflects responses of the magnetosphere to varying solar-wind pressure on its boundary; increases in the solar-wind pressure result in corresponding increases in Dst values.

The present report is a sequel to two previous publications which gave hourly Dst values for the International Geophysical Year, July 1957 to December 1958 (Sugiura, 1964), and for the years 1961, 1962, and 1963 (Sugiura and Hendricks, 1967). The method of derivation of Dst adopted here is described in these publications. The observatories used are the same as those for 1961-63, namely, Hermanus, San Juan, and Honolulu. The locations of these observatories are shown in Table 1.

Table 1 – Coordinates of the observatories used.

Observatory	Geographic		Geomagnetic dipole latitude
	Latitude	Longitude	
Hermanus	-34.4°	19.2°E	-33.7°
Honolulu	21.3°	201.9°	21.1°
San Juan	18.4°	293.9°	29.9°

THE REFERENCE LEVEL

To insure a continuity of Dst over many years, its reference level has been assigned with special care. In deriving Dst for 1962 and 1963 (Sugiura and Hendricks, 1967) the reference level for each observatory was defined in a manner which took into account the secular variation. For each observatory, the reference level

was expressed by a power series in time, and the coefficients for terms up to the quadratic were determined by the method of least squares using annual means of 10 quiet days.

In the present determination of Dst for 1964, 1965, 1966, and 1967, the 1962-63 coefficients were used, and the reference level for each observatory was simply extrapolated from the power series. A comparison of the calculated and observed reference levels of H up through 1963 was shown in the previous report (Sugiura and Hendricks, 1967; Tables 2a, 2b, 2c). Here, a similar comparison is made in Table 2, which shows that the differences between the observed annual averages and the computed values for the mid-year points are more irregular than those for 1961-63. This point will be examined in the future when the secular change coefficients are updated.

REMOVAL OF THE QUIET DAILY MAGNETIC VARIATION S_q

The method adopted here for the removal of S_q is the same as that used previously (Sugiura and Hendricks, 1967).

FIGURES AND TABLES OF Dst FOR 1964, 1965, 1966, AND 1967

Hourly values of equatorial Dst for the years 1964, 1965, 1966, and 1967 are given in Table 3 and are presented graphically in Figures 1a, 1b, 1c, and 1d. In each of these figures, the ordinates for the upper and lower horizontal lines for each month are indicated below the graph in γ .

Table 2 – Comparison of observed and computed reference levels for H .

Station	Epoch	Observed* H	Computed H	Difference
Hermanus	1964.5	12,603 γ	12,616. γ	-13 γ
	1965.5	12,529	12,529.	0
	1966.5	12,444	12,455	-11
Honolulu	1964.5	28,043	28,045	-2
	1965.5	28,022	28,014	8
	1966.5	27,998	27,978	20
San Juan	1964.5	27,672	27,670	2
	1965.5	27,662**	27,670	-8
	1966.5	27,668**	27,669	-1

*Annual mean of 10 quiet days.

**In 1965 the San Juan Observatory was moved from the old site at $18^{\circ}23'N$, $293^{\circ}53'E$ to a new location at $18^{\circ}06.8'N$, $293^{\circ}51.2'E$. The move resulted in a decrease in the horizontal component by 110γ . Since the formula expressing the secular variation refers to the old location, the hourly values obtained at the new site were adjusted to the old site by adding 110γ . Likewise, the annual means of 10 quiet days listed above for 1965 and 1966 are observed annual means plus 110γ .

ACKNOWLEDGMENTS

We wish to thank the Hermanus Magnetic Observatory and the Environmental Science Service Administration for making the data available. We are greatly indebted to the staff of the World Data Center-A for Geomagnetism for their invaluable assistance.

NATIONAL AERONAUTICS AND
SPACE ADMINISTRATION

STER: If Undeliverable (Section 158
Postal Manual) Do Not Return

"The aeronautical and space activities of the United States shall be conducted so as to contribute . . . to the expansion of human knowledge of phenomena in the atmosphere and space. The Administration shall provide for the widest practicable and appropriate dissemination of information concerning its activities and the results thereof."

— NATIONAL AERONAUTICS AND SPACE ACT OF 1958

NASA SCIENTIFIC AND TECHNICAL PUBLICATIONS

TECHNICAL REPORTS: Scientific and technical information considered important, complete, and a lasting contribution to existing knowledge.

TECHNICAL NOTES: Information less broad in scope but nevertheless of importance as a contribution to existing knowledge.

TECHNICAL MEMORANDUMS: Information receiving limited distribution because of preliminary data, security classification, or other reasons.

CONTRACTOR REPORTS: Scientific and technical information generated under a NASA contract or grant and considered an important contribution to existing knowledge.

TECHNICAL TRANSLATIONS: Information published in a foreign language considered to merit NASA distribution in English.

SPECIAL PUBLICATIONS: Information derived from or of value to NASA activities. Publications include conference proceedings, monographs, data compilations, handbooks, sourcebooks, and special bibliographies.

TECHNOLOGY UTILIZATION PUBLICATIONS: Information on technology used by NASA that may be of particular interest in commercial and other non-aerospace applications. Publications include Tech Briefs, Technology Utilization Reports and Notes, and Technology Surveys.

Details on the availability of these publications may be obtained from:
